

Maria Vittoria Cubellis obtained a degree in Chemistry and a Ph.D in Biochemistry.

At the present she is a full professor of Biochemistry at the Department of Biology of the University Federico II.

She has devoted great efforts to introduce bioinformatics in the education of the students of biology and she is in the board “collegio dei docent” of the Ph.D. course “COMPUTATIONAL AND QUANTITATIVE BIOLOGY”, University Federico II.

Her recent research interests are focused on diagnosis and the cure of some rare diseases such as Fabry disease, the disorder of glycosylation and Beckwith–Wiedemann syndrome where she applies an integrated approach exploiting bioinformatics as well as wet lab tools.

Her main research products can be found in SCOPUS (ID: 6603958089), ORCID (0000-0001-6147-6553), and Google Scholar (profile: Maria Vittoria Cubellis).
