

Marialetizia Palomba has a PhD in Ecology and Sustainable Management of Environmental Resources. Actually, she is researcher (RTDA) in Parasitology at Tuscia University. Her central research interest is in the field of molecular and evolutionary marine parasitology. In particular, she studies evolutionary aspects of the marine host-parasite interactions by applying an “omic” approach (including genomics, transcriptomics, and proteomics). She is also active in the research field concerning: i) molecular systematics and phylogeny studies of marine helminth parasites of cetaceans, teleost fish, elasmobranchs, and sea birds, ii) epidemiological studies on parasites of commercial fish and iii) use of parasites as ecological indicators of food webs and fish stocks.
