

Livio Favaro (born 19 August 1980) is an ethologist (MSc in Evolution of Animal and Human Behaviour in 2007 and PhD in Evolutionary Biology and Biodiversity Conservation in 2012) and Associate Professor in zoology (2022) at the University of Turin. His research falls under the umbrella of evolutionary zoology, with a particular focus on bioacoustics, vocal anatomy, and the evolution of vocal complexity. Within this framework, Livio has been studying acoustic communication in primates, livestock, marine mammals, and penguins. Livio's current research assists in developing passive acoustic census methods for the remote monitoring of the marine fauna. Livio is also involved in several PhD and post-doc projects in comparative cognition of marine vertebrates.
