

PLANKTON ECOLOGY

Plankton Ecology Manager: Carmen Minucci

WET LAB #T35

The Wet Lab, located on the ground floor of the SZN centre in Naples (room #T35) is the first landing place for seawater samples to be filtered for studies on the water column and for the preparation of algal culture media. Sea water must be filtered, sterilized and enriched under a laminar flow hood with the nutrients necessary for the various lines of research on live plankton

The equipment in the Room #T35 (Ground floor (East Wing)) are listed below and bookable [here](#).

Bookable instruments	Description	
Laminar Flow Hood	BIOAIR SAFEMATE Vision 1.2 Laminar Flow Hood. This instrument is intended for sterile handling of sterile sea water, algal medium and live plankton samples.
